

1 **ABSTRACT OF THE DISCLOSURE**

2 A vapor cleaner includes a mainframe having a hole defined in a hollow body of
3 the mainframe, a recess defined in the hollow body to receive therein a filter with an
4 inlet in communication with the hole and an outlet in communication with a telescopic
5 tube, a control pump sandwiched between the outlet of the filter and the telescopic tube
6 for pumping water to the telescopic tube, a nozzle assembly detachably connected to the
7 mainframe and having a heater received in the nozzle assembly for heating the water
8 pumped by the control pump to flow through the heater from the telescopic tube, and a
9 reservoir detachably connected to the mainframe via a locking device
